RESEARCH PROFILE

I design and study intelligent user interfaces that integrate AI, multimodal interaction, and user-centered design to enhance human capabilities in complex digital environments. My work spans intelligent interface design, large language model integration, and interaction techniques that adapt to diverse user needs. Methodologically, I combine participatory design, system building, and empirical evaluation to create deployable, data-driven solutions. While I have specialized expertise in accessibility—collaborating closely with blind and low-vision users to address extreme-use cases—my research insights and systems extend to broader populations, informing the design of adaptive, transparent, and customizable AI-powered tools for productivity, creativity, and decision-making.
